Directions for Use:

Use Tex-25 with a vacuum exhaust system to remove solvent vapors. Place stain fabric on cleaning buck (arm or spot cleaning station). Turn the adjustable nozzle to a position that is strong enough to shoot out the stain yet not so concentrated as to damage the fabric. Hold gun 6-10 inches from the fabric, starting from the outside of the stain working inwards shoot out the stain. Immediately afterwards "feather" the stain by turning the nozzle to a fine mist setting and spray around the area of the removed stain. This will reduce the "rings" that can sometimes form on some fabrics. Allow fabric to air dry or speed dry with vacuum system and/or compressed air.
